

WHEEL CHOCKS

Product Information

Vulcascot produce wheel chocks which are suitable for all applications within the aviation and road transport industries.

They are extremely hard wearing and are produced from a specially formulated rugged rubber compound that is ideally suited to withstand the harsh conditions of these demanding industries.

The triangular chocks are rounded at the corners to prevent profile damage and are heavily ribbed on all three sides to aid grip.

Each rubber wheel chock is supplied fitted with a 300mm eyebolt and a length of blue polypropylene rope to aid handling.

| | Weight | Length | Width | Height | Code | Part No. | EAN |
|----------|--------|--------|-------|--------|---------|----------|---------------|
| Standard | 5.8Kg | 250mm | 150mm | 170mm | VCPWC01 | 26405000 | 5060429032346 |
| Large | 11Kg | 250mm | 220mm | 235mm | VCPWC02 | 26405100 | 5060429032353 |

Note- All Dimensions and weights are nominal

- Safe and secure in operation
 - Hard wearing non slip rubber
 - Designed to stop vehicles and Aircraft from moving
 - HiVis yellow stripes available for greater visual awareness
 - Custom lengths available up to 1 Metre (Please call for details)
 - Manufactured in the UK
